Abstract (en)

[origin: EP0518078A1] The invention relates to a non-self-supporting ship cabin (21) which, without its own floor, stands with its wall panels (18a) on a sliding frame (1) dimensionally stable in a horizontal plane and after production ashore can be transported without problem to the intended location on the deck of a ship. On account of the sliding frame (1), the ship cabin (21) need not be dimensionally stable, which means a considerable saving in weight. For transport purposes, the sliding frame (1) together with the ship cabin (21) is pulled across the ship's deck. <IMAGE>
