Abstract (en)

An electronic apparatus for monitoring the discharge of fluid from the compartment of a transport container to a static tank comprising a means (25, 28, 31) for identifying the fluid stored in the compartment, a means (25, 28, 31) for communicating with a remote device at the static tank to determine the identity of fluid in the static tank and a means (25) for comparing the identity of fluid in the compartment with that of the static tank. The apparatus may further comprise means (25, 26) for preventing discharge of fluid from the compartment. <IMAGE>
