Abstract (en)  
The invention relates to a mine with sensor wires (6) which are wound on reels (8a) and which are ejected through an orifice (43) in the body (2) of the mine by means of an ejection system (10a) comprising a shearing means (41), such as a plate, for cutting out a cover (42) from a flange (40) forming a plane wall of the body (2), a movable assembly (25) for displacing the shearing means (41), and a pyrotechnic charge (45) for driving the movable assembly (25). A projectile (50) is attached to one end of each sensor wire (6), and the charge (45) is used for ejecting all the projectiles (50) through the orifice (43). <IMAGE>
