Abstract (en)

[origin: EP0518723A1] Method making it possible to discharge at a reduced rate, in the form of drops, a gel, in particular a hair styling gel, having a viscosity of between 2 and 8 pascals.seconds. According to this method, the gel (G) is projected under pressure into a channel ending in a restricted opening (44) and a gas (P) under pressure is introduced into the said channel in order to form drops of gel separated by drops of gas (P), the gas (P) being a gas which cannot be mixed with the gel (G) and the gel (G) and the gas (P) being stored separately. <IMAGE>
