Abstract (en)

[origin: EP0518750A1] The invention relates to a waggon (1) comprising, at one end, a movable ramp (2) which is lowered simultaneously with the buffers (8). The movable ramp (2) and the platform of the waggon (1) carry rails, on which the bogies (4) can roll. Arranged parallel to these rails are C-shaped slideways, in which are displaced chains, the ends of which carry hooks for gripping the bogie (4) and hauling it onto the ramp (2) and the platform (1). These chains and the hydraulic ramp-actuating jacks (2) receive the working fluid from a motor-driven pump unit (22) via the controls (23). <??>The platform of the waggon (1) carries systems for securing the bogies (4) for rail travel. <IMAGE>
