Abstract (en)

[origin: EP0518762A1] The electrical installation comprises modular apparatuses (39) which can be plugged in relative to a socket and comprise a terminal (20) for lateral connection to a multi-pin connector (61), by means of a connection endpiece (81) and of a flexible wire (91) to which this endpiece (81) is fixed. The endpieces (81) are guided in insulating frames (racks) (79) which are separate components each common to a plurality of apparatuses (39) and held in place by the fixing of the endpieces (81) in the lateral terminals (20) of the apparatuses. The frames (racks) (79) guide the endpieces (81) between a position of engagement in the terminals (20) and a set-back position in which the endpiece is disengaged from the terminal (20) and permits the extraction of the apparatus (39). Use for enabling the endpieces to be prepositioned before installing the apparatuses, and the position of the endpieces to be memorised in the event of the apparatuses being removed. <IMAGE>
