Abstract (en)

[origin: EP0518768A1] The device makes it possible to cut the electrical power supply to a plurality of members (950) of a household electrical appliance, during certain displacements of a cam unit (600) for programming the said members (950). The device comprises a mechanical interrupter (70), a rocker (30) cooperating by way of a pinion (40) with two toothed wheels (12, 23) belonging respectively to a kinematic chain (100) for the stepped driving of the cam-unit (600) and a kinematic chain (200) for the fast driving of the cam-unit (600). A cam (60) enables the rotations of the rocker (30) to be converted into a control motion for the said interrupter (70). <IMAGE>
