Abstract (en)

[origin: EP0518817A1] In a spinning machine (27), bobbins (15) or empty tubes (16) are received by a transport system at an entry point (33) or transferred to an exit point (32), loading taking place in each case from a buffer (29) or into another buffer (28). The transport speed of the system is regulated in dependence on the loading state of the buffers (28, 29), so that as few standstills as possible occur in the transport system. <IMAGE>
