Abstract (en)

The instant invention concerns a connecting and supporting joint, to be used in the construction of equestrian jumps, obtained by the blocking of two identical, square sectioned flanges (2), each of which has a hole (3) at the centre, surrounded by a peripheral collar (3a) , from which there extend radially - at intervals of 90 DEG - four semi-cylindrical profiles (4) connected and joined by the same number of triangular sectioned gusset plates (5). <IMAGE>
