Abstract (en)
[origin: WO9113985A1] A substantially pure Leukaemia Inhibitory Factor (LIF) which is capable of associating with a mammalian extracellular matrix. Preferably, the N-terminal sequence comprises: NH₂-U-arg-X-arg- where U is the residue of a peptide of 20 or fewer amino acids, or a covalent bond, and X is any amino acid. Such N-terminal sequences may also be attached to other proteins or peptides in order that they may become associated to the ECM.

Abstract (fr)
Facteur inhibiteur de la leucémie (LIF) pratiquement pur, capable de s'associer à une matrice extracellulaire de mammifère. De préférence, la séquence terminale N comprend: NH₂-U-arg-X-arg- dans laquelle U est le résidu d'un peptide de 20 acides aminés ou moins, ou une liaison covalente, et X représente tout type d'acide aminé. Ces séquences terminales N peuvent également se relier à d'autres protéines ou peptides afin de s'associer à la matrice extracellulaire (ECM).
