Abstract (en)

[origin: WO9113723A1] Method of making and method of use of a versatile device designed to hold objects by clamping without damaging them, said device comprising the combination of: a cylindrical support (1) like a rod or tube, not necessarily of circular cross-section; at least two movable arms (2) capable of sliding along and assuming several positions about said support (1) and each extending some way beyond the support essentially at right angles; at least one substantially elastic buffer (3) secured to one of the arms (2) at a distance from said support (1) and having, opposite the arm to which it is secured, a supporting surface essentially at right angles to the support.
