Abstract (en)

[origin: EP0519116A1] The invention relates to a method for covering a stack of articles with stretch-film hoods, in which a hood which has been prestressed in the direction of the circumference is pulled over the stack of articles and its lower edge is folded under the stack of articles or a pallet supporting the stack of articles and fastened there. The invention also relates to a device for implementing the method. So that the stretched-film hood can be kept free of folds and can be pulled over a stack of articles in such a way that the hood can also accommodate diagonal forces, once the hood has been pulled over, its lower edge is to be taken hold of, restretched in the longitudinal direction of the hood and then folded over.
