Abstract (en)

A cap (1) having a top (2) and a depending skirt (3) which receives the neck of a container at its lower end, wherein the skirt (3) is provided at its outer and upper end portion with a first engaging means (6,7) for engaging an annular spanner located around the cap (1), and a seating means (8) at the base of the first engaging means (6,7) on which the annular spanner rests. Preferably the cap is for a medicine container and is circular; In a further embodiment the cap is a two part child resistant cap designed to provide tamper evidence; There is further provided a medical implement adapted to engage over the cap and a kit comprising the cap and an annular spanner. <IMAGE>
