Abstract (en)

The invention relates to a linking device for articulated vehicles, particularly railway vehicles, which is intended for making the connection between an intercommunication body resting on a bogey and the ends of adjacent carriages carried by the intercommunication body, the carriages and the intercommunication body being attached to one another in the lower part, characterised in that, in the upper part, each carriage end (2, 3) is connected to the body (1) by means of an articulation link (10, 11), the articulation links being connected to one another by means of connection elements, the assembly formed by the articulation links and by the connecting elements constituting a deformable parallelogram. <IMAGE>
