Abstract (en)
[origin: EP0520268A1] To be able to provide installation units which have load-bearing profile elements at least on their two opposite vertical sides also with gripping constructions for the disabled without changing their basic set-up, angle pieces (19) reinforced as bearers for wall supporting grips (24) and/or supporting hinged grips (25) are provided. The said angle pieces are screwed on-end onto both vertical sides of the insulation unit (10) with one leg (20) on the profile elements (12). The wall supporting grips (24) and/or supporting hinged grips (25) are fastened to the outwardly protruding legs (21) of the angle pieces (19). The outside of the legs (21) is essentially flush with the front side of the installation unit (10). The angle pieces (19) are preferably produced from U-profile metal sheet. The flanges (23) are mitre-cut and welded on the upper and lower edge of the angle pieces (19), at the bent point of the angle pieces (19). Various patterns of drill-holes on the legs (21) make it possible to screw on different makes of wall supporting grips (24) or supporting hinged grips (25). <IMAGE>
