Abstract (en)

The dispenser device (10) for dispensing a predetermined quantity of a fluid substance contained in a deformable bag (30) is provided with a manual suction and delivery pump (16) for drawing the substance to be dispensed from the bag (30). To ensure complete extraction from the bag (30) of the substance to be dispensed, the bag is bellows-shaped. To prevent the substance contained in the normally polyethylene bag (30) from being reached by ultraviolet rays which could degrade it, and to prevent this substance being able to migrate through the polyethylene, the bag is enclosed in an aluminium enclosure (28). <IMAGE>
