Abstract (en)  
[origin: EP0521284A2] In the case of this terminal block, whose conductor connections (2) are connected via socket contacts (5) by means of a plug-on module (7) which contains a switching device, the desired interruption point (12) in the upper region of the plug-on module (7) is arranged to be freely visible from above and accessible, above the wiring plane of the terminal block. Easy handling of the interrupter lever (15) of the interruption point (12) is possible. In the event of damage in the region of the interruption point, it is sufficient to replace the plug-on module (7).
