Abstract (en)

[origin: EP0521294A1] The invention relates to a shaver head arranged at the front end of a handle, especially the razor blade unit of a wet razor, in which a single or double razor blade (5) is resiliently arranged in a plastic casing (1) with a front guide strip (8). In order to produce a shaver head, especially the razor blade unit of a wet razor, with improved spring mounting of the single or double razor blades, it is proposed according to the invention to attach the single or double razor blade (5) to a blade block (4) which is mounted in the plastic casing (1) so as to be pivotable against the resistance of the spring about an axis (A) which is parallel to the guide strip (8). <IMAGE>
