Abstract (en)

[origin: EP0521295A1] The invention relates to a shaver head arranged at the front end of a handle, especially the razor blade unit of a wet razor, in which a single or double razor blade (5) is resiliently arranged in a plastic casing (1). In order to produce a shaver head, especially a razor blade unit of a wet razor, with improved spring bearing of the single or double razor blades, it is proposed according to the invention to attach the single or double razor blade (5) to a blade block (4) and to mount the blade block (4) on a four-bar mechanism (6) with two pivoting levers (7, 7') which can each be pivoted against the resistance of the spring between the plastic casing (1) and the blade block (4) on joints (A,C; B,D) with axes parallel to the cutting edge(s) (10) of the razor blade(s) (5). <IMAGE>
