Abstract (en)
[origin: EP0521394A2] There is disclosed a sorting device in particular for systems using sorting pockets wherein the two output chutes and respective collection containers are vertically superimposed one over another and the flap member designed to selectively divert the object discharged from the pocket on one of the two chutes rotates about a horizontal pivot arranged parallel to the inlet edge of the upper chute and near thereto. This allows a remarkable reduction in room at parity of outputs. <IMAGE>
