Abstract (en)

[origin: EP0296356A2] For supplying efficient packaging machines with web-shaped packaging material wound into reels (11, 11a, 12), a reel-changing device is proposed in which two working spindles (13, 14) are alternatively charged with ("full") reels (11a), while the respective, other working spindle carries the working reel (12) which unwinds in the meantime. The new reels (11a) are taken from a reel stock (18) by a transfer arm (21) provided with transfer spindles (22) and by pivoting to the one or other side are moved into an axially identical position with the one or other working spindle (13, 14). When the positioning is identical, reel (11a) is pushed onto the empty working spindle (13, 14). For this purpose, the transfer arm (21) is swivellable and can be displaced axially parallel with respect to the working spindles (13, 14). <IMAGE>
