Abstract (en)

A tamper-evident container and closure assembly is disclosed wherein the closure includes an anchor band (11) connected to a cap part (8) of the closure by frangible means (12), the anchor band (11) being provided internally with restraining means (13), to engage with external restraining means (6) on the container when the closure is first applied to the container and wherein the assembly includes means to prevent removal of the closure from the container by simple upward pressure while the anchor band (11) is connected to the cap part (8) of the closure, the arrangement being such that to remove the closure from the container it is necessary only to twist the cap part (8) of the closure which in turning relative to the anchor band (11) breaks the frangible means (12) whereupon the cap part (8) can be lifted off the container and the anchor band (11) can be discarded. <IMAGE>
