Abstract (en)  
A safe is disclosed which can be used in one mode for the display of valuable items and which can be converted to a non-display mode to provide a higher level of security for its contents against burglary and/or fire. The top surface of the safe is configured as a viewing window 6. Within the safe a tray 11 for the display of valuables can be raised to an upper position adjacent the window 6, and lowered to a non-display position, by motorised lifting gear 12. A pair of motorised flaps 13 can be closed over the tray 11 when in its lowered position or opened to permit the tray to be raised up between them. The flaps 13 and side walls 2,3 of the safe comprise a material having high resistance to penetration by burglarious attack and/or to transference of heat to the interior if exposed to fire. <IMAGE> <IMAGE>
