Abstract (en)
[origin: WO9114385A1] A seat mechanism for resilient inclined mounting of the seat of a swivel chair on an underframe (10) comprises a mobile metal fitting part (38) supported by laminated leaf springs (54, 56) on the stationary metal fitting part (16). The laminated leaf springs (54, 56) run along the underside of the mobile metal fitting part (38) at a slight angle thereto. The inclination of spring seat part (46), which abuts on one end of the laminated leaf springs (54, 56), can be adjusted by a threaded drive (74, 76); the preloading of the laminated leaf springs (54, 56) can therefore be adjusted by the user.
