Abstract (en)
[origin: WO9214056A1] The radial-piston pump disclosed has a cylinder block in which the pistons are fitted so that they can move radially in a straight line. The cylinder block has a surface facing radially outwards on which cylinder head pots (8) are mounted so that they surround the pistons, forming a pressure-tight seal. The cylinder block, together with the cylinder head pots (8) mounted on it, is enclosed in an outer casing (1), with which it forms the outlet chamber of the pump.
