Abstract (en)
Polycarbonate alveolate paneling strip, particularly for building curtain-walls and the like, constituted by a single body (1) which comprises a pair of spaced and mutually parallel panes (2) which are mutually connected by a plurality of transverse laminae (3) and are provided, along a female coupling side (5), with a longitudinal recess (7) which has two opposite walls, each of which is affected by a same sequence of longitudinal indentations and protrusions, and has, along a parallel and non-adjacent male coupling side (12), a protruding longitudinal ridge (14) which has, along its sides, a sequence of longitudinal protrusions and indentations which is complementary to the one provided in the recess on the other coupling side, so that a male coupling side of one paneling strip can enter a female coupling side of an adjacent paneling strip for mutual watertight engagement. <IMAGE>
