Abstract (en)
[origin: WO9115279A1] The invention relates to a game with mobile figures which can be moved over a board. The technical field of the invention is that of manually controlled games and toys. A game according to the invention comprises a board on which figures can be moved within longitudinal strips by driving means arranged below the board. The driving means comprise at least one handle and means for joining them to the figures. The game comprises at least 2 sets which can be moved along the longitudinal median axis of the game by means of said handles. Each set comprises at least one longitudinal element (11, 28, 38), at least one vertical element (14, 27, 37) and at least one transverse element (12, 26, 36). The vertical and transverse longitudinal elements are rigid and rigidly interconnected. The handle, which projects beyond the longitudinal side flanks of the frame of the game, can move longitudinally along said flanks in at least one slot (6) over a distance (53) equal to approximately half the length of the frame.
