Abstract (en)
[origin: WO9213794A1] The invention relates to a device for securing an unlockable coupling for multiple path containers for viscous fluids (e.g. lubricating oil) mechanically during the coupling procedure and hydraulically once coupled. The coupling consists of a section A (4) into which several valves (6, 8) on the multiple path container (5) are integrated and a section B (9) which is fitted in the dispensing system with several valves (11, 12).
