Abstract (en)
[origin: EP0523329A1] A foot for small containers consists largely of a sheet metal blank which is bent several times and has integral projecting pieces to form at one side the foot rest (10a, 10b) and, at the other side, the container rest (12a, 12b) which is shaped to correspond to the bottom surface of the container. The surface pressure exerted on the container wall is advantageously minimised by these rests lying flatly against the container tank, thus preventing a high surface pressure which acts in a punctiform manner. Additionally, no time-consuming welding work is required in the production of the foot rests. <IMAGE>
