Abstract (en)  
A method of delivering a benefit or treatment agent to the hair and/or scalp comprises electrostatically spraying the benefit or treatment agent onto the hair and/or scalp under regulation of delivery localisation means which cause the said agent to be delivered preferentially to the hair and/or scalp and away from a user's eyes or other body parts. In a preferred embodiment, the components of the electrostatic spraying apparatus are contained within a hair brush or comb assembly, so that the benefit or treatment agent may be delivered during a normal brushing or combing regime.
