Abstract (en)

[origin: EP0524534A2] A process for the adsorptive purification of vegetable oils and/or mineral oils and fats operates using a multi-stage counter-current process. At least a part of the solid phase leaving the first separation stage is mixed batchwise or continuously with a part-quantity of the purified oil or fat leaving the last separation stage. The mixture produced as a result is fed to a downstream filter. <IMAGE>
