Abstract (en)  
[origin: EP0524631A1] A mounting device (11) for insulating glazing (4) is designed in the form of a two-legged angle piece which lies on and/or bears against the casement (3) receiving the insulating glazing (4) and has, to support the outer glazing (5), a receiving pocket (14) surrounding the edge of the latter. As a result of this design of the mounting device, it is possible to support both the glazings (5, 6) individually and a secure locking of the insulating glazing (4) in the lateral direction is also afforded. Moreover, mounting of the insulating glazing (4) is also made considerably easier and quicker. <IMAGE>
