Abstract (en)

[origin: EP0524666A1] The tile comprises on its rear face (2) a plurality of continuous projecting ridges (3) alternating with corresponding furrows (4) distributed regularly over the entire face (2); the ridges (3) and furrows (4) are arranged geometrically such that they do not intersect each other and that all reach the perimetral edge (6) of the tile. The tile according to the invention considerably improves its intrinsic capacity for evacuating the air from the material during pressing. <IMAGE>
