Abstract (en)

[origin: WO9214652A1] A pre-glued, flat folding box contains a section of tubular film (5) glued to the box to form an inner bag. The tubular film section has bending lines (8, 9) in all four corners of the body of the folding box which extend to the edges of the section of tubular film. This makes it easier to stand the folding box containing the section of tubular film upright and to fill and close the package.
