Abstract (en)

[origin: EP0525490A1] In a conjugate cam shedding machine for looms - of the type having narrow-gauge conjugate cams which cause desmodromic oscillating movements of cam followers (13) controlling the heald frames - said cams form together a movable cam block (1), apt to part from said cam followers so as to allow their free oscillation. Said machine also comprises a mechanism (14), synchronized with the parting movement of the cam block and interacting with said cam followers in a plurality of different pre-selectable ways. <IMAGE>
