Abstract (en)

The device for dispensing fluid and/or semi-fluid products, for example silicones comprises a tubular body (1) in which a cartridge (2) which contains a product (3) to be dispensed is accommodated. The body is provided, at the front, with a dispensing nozzle (10) which defines an annular chamber (13) around a product output spout (5). The body is provided, at the rear, with telescopic pusher means (17) which act on the cartridge (2). A cutoff valve (20), to be connected to a compressed air supply hose (45), is connected to the annular chamber (13) and to the pusher means (17) and is associated with the tubular body (1). <IMAGE>
