Abstract (en)

[origin: EP0525596A1] A device for grinding and mixing material to be conveyed with and without a solid content is disclosed, in which the stator (8) which is equipped with inwardly projecting teeth consists of a plurality of toothed racks (13) which are arranged one next to the other. These toothed racks (13) are held on the end sides of the stator (8) in fixing rings (15). The toothed racks (13) can each have a gap spacing 17 from one another which is defined by wings (16) formed on the fixing rings. The toothed regions of the rotor (7), like those of the toothed racks (13), can be arranged in a replaceable fashion. Between the inner wall (22) of the housing (2) and the outer wall (21) of the stator cylinder, a discharge gap (20) is provided which, in a particular embodiment, grows bigger in a worm-shape in the direction of the discharge opening (6). <??>The field of application is the sanitation industry. <IMAGE>
