Abstract (en)  
[origin: EP0526406A2] The machine comprises two sections (2, 3) and at least one pair of mutually opposed cam carriers (4, 5). These cam carriers are independent and are driven individually, for example by means of notched belts (10, 13) and motors (12, 15). The omission of the bow of the carriage makes it possible to arrange a large number of bars (17 to 22) for individually driven yarn guides. The yarns arrive at the yarn guides by the shortest route and the working speed can be increased considerably. <IMAGE>
