Abstract (en)

[origin: EP0526742A1] The invention relates to a plastic container in the form of a case made of two identical parts. Each part, as an injection-moulded part, forms one shaped half, which shaped halves are each constructed with a bottom, side walls, a front side and a rear side. Furthermore, on each front side there is a shaped handle and a closure part and, on the rear side, a hinge part. The closure part (22) is an integral constituent of a shaped half (10), and a movable part (222) of the closure part is connected to the shaped half (10) via a film hinge (226). <IMAGE>
