Abstract (en)

[origin: WO9117557A1] Proposed is a keyboard for electronic equipment, the keyboard being designed to screen off HF signals emerging principally from inside. The invention does this by using a metal housing, made preferably of extruded aluminium (2), which is closed off at the two ends by end-pieces and underneath by a metal plate (30). The connection from inside to outside the keyboard is designed in such a way that a change in direction is involved, thus sufficiently damping any HF radiation which may pass through a small gap.
