Abstract (en)  
[origin: EP0527308A1] The lining has a head ring (1), which is adjoined by the ends of a neck strap (7), and a chin strap (8). The head ring (1) is provided in the neck region with a plurality of tongues (10) which are arranged distributed adjacently in the circumferential direction of the ring, are directed downwards, and have guiding receivers (12) for the neck strap (7) at the end (11) of the tongue, in which guiding receivers the neck strap (7) is displaceable in its longitudinal direction and is held with spacing from the head ring (1) determined by the length of the tongue. The chin strap (8) adjoins the neck strap (7) on both sides in each case between its end on the head ring (1) and the first tongue (10) so that the neck strap can also be tightened automatically together with the chin strap. <IMAGE>
