Abstract (en)

[origin: EP0527453A1] In a device for checking the quality of printed sheets (5) in a sheet-fed rotary printing machine, having chain-guided gripper beams (8, 10) bearing controllable grippers, a suction box (2) having a flat suction surface (3) facing the sheet (5) is provided above an upper movement path of the grippers in the gap between two spaced-apart processing devices, e.g. a printing unit and a sheet delivery device, through which gripper beams (8, 10) pass. An optoelectronic receiving device is arranged below the suction box (2) and below a lower movement path of the grippers. Said receiving device is connected to a synchronising device.
