Abstract (en)
[origin: US5290000A] A bracket assembly for securing a fitting to a wall. The assembly has a generally T-section plate having a pair of parallel T-flanges, fasteners securing the plate to the wall with the flanges substantially parallel to the wall, a holder adapted to carry the fitting and formed with a T-section slot open at one end, substantially complementary to the flanges of the plate, and normally receiving the plate, and an elastically deflectable latching tongue formed on the holder at the one end and retaining the holder and plate together. Spring formations resiliently engaged between the plate and the holder retain same snugly together. These formations are elastically deformable ribs on the flanges of the plate. The ribs are unitarily formed with the flanges.
