Abstract (en)

[origin: EP0528190A1] A two-component pressurised container, especially for two-component foams, having a valve device, an outer container (1) for a first component and propellants and having an inner container (23) which is closed off relative to the outer container for the second component and, if appropriate, a further propellant, it being possible for the inner container to be opened in the outer container by means of a trigger which can be actuated from the outside, the opening of the inner container taking place by means of a rotary movement of the valve tube (12) relative to the valve seat (6). <IMAGE>
