Abstract (en)

[origin: EP0528334A1] In a device for producing ring-shaped concrete articles fitted with step irons, a mould core (14) is arranged immovably underground. In order to fit the mould core (14) with step irons, a platform (32) is arranged at the side of the mould core (14) outside the path of motion of the associated mantle (24), it being possible for the operator to raise and lower the platform alongside the mould core in order to insert the individual step irons (16) into the appropriate mountings in the mould core (14) in the most favourable ergonomic position in each case. <IMAGE>
