Abstract (en)  
[origin: EP0528394A1] A packaging system, in which the weight and the volume of the packaging to be disposed of are considerably reduced, consists of a handling part (2) and an exchangeable bag or similar soft package (1) with the contents which is received by the handling part (2). The soft package (1) has a ring (10) around an opening (14), and the handling part (2) has a standing surface (5) and an opening (13). In the soft package (1) received by the handling part (2), the ring (10) at the opening (14) of the soft package rests against the edge (12) on the opening (13) of the handling part (2). As a result, the soft package (1) is fixed in the handling part (2). The closure for closing the soft package (1) received by the handling part (2) has a closure part, for example a screw cap (16) which, in the closed position, presses the ring (10) at the opening of the soft package (1) against the edge (12) of the opening (13) of the handling part (2) as a result of which the ring (10) also forms a seal. <IMAGE>
