Abstract (en)

Cable trunking has a cover (40) releasably secured to a channel member (30) by plastics moulded fasteners (1) having a head (2), a stem (5) and lugs (7,9) extending laterally from the stem. The cover has an aperture (10) for receiving the stem and legs therethrough so that the fastener is retained by one of the lugs. Further rotation of the fastener (1) effects the connection by means of the other lug. Use of the fastener (1) is not limited to cable trunking. <IMAGE>
