Abstract (en)

[origin: JPH05193677A] PURPOSE: To facilitate moving of oxygen in the long axis direction in the intermediate parts installed in a first bottle through the neck of a second bottle by a small turn of the second bottle, in spite of making of the second bottle made of the material that does not allow the permeation of oxygen. CONSTITUTION: A packing comprises the intermediate components 8 installed with a central duct 9 receivable of a separable plug 10 fixed at the bottom of the first bottle 1 and the second bottle 2 having a neck 24 installed with a cap 25 for the storage received in the central duct 9. A linking means L is provided between the neck 24 and the cap 25. Between the neck 24 and the central duct 9, a connection means J different from the linking means L is installed. A co-working part 29 of the central duct 9, which co-works with a part 28 of the neck 24 is so disposed as not to interfere with a part 26 of the linking means placed on the neck 24.
