Abstract (en)

[origin: WO9117922A1] A process and device are disclosed for wrapping a cover sheet (6, 7) around a pressed bale (4) in a baling press (1). The cover sheet (5, 6) that is stretched between the pressure ram (2, 3) and the pressed bale (4) is applied on the side faces of the pressed bale (4). A folding frame (10) shapes at the corners a laterally projecting fold in the cover sheet (6, 7), which is then folded over and applied on the pressed bale (4) by means of a movable folding finger (13). The vertically adjustable folding frame (10) can be designed as a contact frame (14) or as several multi-axis movable grids (11).
