Abstract (en)

[origin: EP0529168A1] The subject of the invention is circular jewels comprising a rotary outer ring and methods for manufacturing these jewels. A circular jewel according to the invention comprises an outer ring (1) which is coaxial with an inner ring (2) and mounted rotatably about the common axis (xx1). The inner ring comprises an inner hoop (3) comprising a central part (3a) placed between two thinner ends (3b, 3c) to which it is connected by two shoulders (5a, 5b). It also comprises two lateral hoops (4a, 4b) which bear against the two shoulders (5a and 5b) and are welded onto the ends (3b and 3c) after having engaged the outer ring (1) on the central part (3a). The ring (1) is held trapped in the groove delimited by the two lateral hoops in which it can turn freely. One application is the industrial production of finger-rings, wedding rings, bracelets or pendants. <IMAGE>
